ID	User Story Name	User Story Description
1	Choose a board size and type	As a player, I want to select a board size and type so that I can customize my game experience through board size.
2	Choose the game mode of a chosen board	As a player, I want to choose Manual or Automated mode so that I can either make the moves myself or watch the system play.
3	Start a new game of the chosen board size, type, and game mode	As a player, I want to start a new game with the currently selected board size, type, and game mode so that I can play the game as I intended.
4	Make a move in a manual game	As a player, I want to move a peg by jumping over another peg into an empty space so that I can remove pegs and progress through the manual game.
5	A manual game is over	As a player, I want the game to determine when the manual game is over so that I know whether I have won or lost.
6	Make a move in an automated game	As a player, I want the system to make legal moves automatically so that I can watch the game progress.
7	An automated game is over	As a player, I want the system to stop an Automated game when it is over so that I can see how the game ended.
8	Randomize the state of the board during a manual game	As a player, I want to randomize the peg layout during a Manual game so that I can continue playing from a different board state.

User Story ID and Name	AC ID	Description of Acceptance Criterion
1. Choose a board size and type	1.1	*AC 1.1 Customizing the board size* Given that the program is open When a player selects the Board Size drop down menu and chooses a board size Then that board size will be configured on the screen And all valid board positions will contain pegs except the center position, which should be empty
	1.2	*AC 1.2 Default board size* Given that the program is not yet open When a player first opens the program Then the board size defaults to 7 And all valid board positions will contain pegs except the center position, which should be empty

	1.3	*AC 1.3 Customizing the board type* Given that the program is open When a player selects a board type radio button Then that board type will be configured on the screen And all valid board positions will contain pegs except the center position, which should be empty
	1.4	*AC 1.4 Default board type* Given that the program is not yet open When a player first opens the program Then the board type defaults to English And all valid board positions will contain pegs except the center position, which should be empty
2. Choose the game mode of a chosen board (manual/automated)	2.1	*AC 2.1 Select a game mode* Given that the program is open and a board size and type are selected When the player selects Manual or Automated mode Then the selected mode is set for the next game with the chosen board size and type.
	2.2	*AC 2.2 Default game mode* Given that the program is not yet open When a player first opens the program Then the game mode defaults to Manual
3. Start a new game of the chosen board size, type, and game mode	3.1	*AC 3.1 Starting the game* Given that the program is open When a player selects “Start Game” Then the game begins with the currently configured board size, type, pegs, and selected game mode
4. Make a move in a manual game	4.1	*AC 4.1 Player makes a valid move* Given the player is playing the game And the player has selected a peg that can jump orthogonally or diagonally over an adjacent peg into an empty space two positions away When the player clicks on the empty space Then the selected peg should move to the empty space and the jumped peg should be removed
	4.2	*AC 4.2 Player attempts an invalid move* Given the player is playing the game And the player selects a move that does not follow the rules of Peg Solitaire When the player attempts to make the move Then the move should not be performed and the board should remain unchanged

	4.3	*AC 4.3 Player undoes a move* Given the player is playing the game And the player has already made one or more valid moves When the player clicks the undo button Then the most recent move will be undone and the board will return to the state it was in before that move
5. A manual game is over	5.1	*AC 5.1 Player wins the game* Given the player is playing a Manual game When there is only one peg remaining on the board Then the system should end the game And display the player's rating as Outstanding
	5.2	*AC 5.2 Player has no valid moves remaining* Given the player is playing a Manual game When there are no more valid moves left and at least two pegs remain Then the system should end the game And display the player's rating based on the number of pegs remaining: Very Good for 2, Good for 3, and Average for 4 or more
6. Make a move in an automated game	6.1	*AC 6.1 System makes a valid automated move* Given an Automated game is running and at least one legal move is available When the system takes its next turn Then it moves a peg over an adjacent peg into an empty position two spaces away in a direction allowed by the board type And it removes the jumped peg without requiring the player to select a peg or destination And the legal move it chooses is random if there are two or more options
7. An automated game is over	7.1	*AC 7.1 System wins the game* Given an Automated game is running When only one peg remains Then the system should stop making moves And indicate that the game is over.
	7.2	*AC 7.2 System has no valid moves remaining* Given an Automated game is running with at least two pegs remaining When no valid moves are available Then the system should stop making moves And indicate that the game is over
8. Randomize the state of the board during a manual game	8.1	*AC 8.1 Randomize the current board* Given a Manual game is in progress When the player selects Randomize Then the system displays a different arrangement of pegs and empty spaces using only valid positions on the current board

	8.2	*AC 8.2 Continue from the randomized board* Given the board has been randomized and at least one legal move is available When the player attempts a legal move on the new layout Then the system applies the move to the randomized board
	8.3	*AC 8.3 No valid moves after randomizing* Given a Manual game is in progress When the player selects Randomize and the resulting board has no valid moves Then the system immediately ends the game And displays the player's rating based on the number of pegs remaining
